

Development medical technology: From idea to market readiness

Services Engineering

Together with national and international clients, ai6 Solutions GmbH develops innovative solutions for sophisticated medical technology products. From the initial idea through to series production, we support the entire development process and lay the foundations for long-term product success.

Our interdisciplinary team of experts in **systems engineering, design, electronics, software and firmware** work hand in hand. The close integration of all specialist areas results in technically mature, cost-effective and regulatory-compliant solutions.

We integrate relevant standards, regulatory requirements and proven development processes right from the concept and development phase. In this way, we reduce development risks, support efficient approval processes and shorten **time-to-market**.

With in-depth engineering expertise, many years of experience and a clear commitment to quality, we develop medical devices that meet the highest standards of safety, functionality and reliability.

From concept to market readiness – engineering from a single source.

Project examples

Babyphone „Sandy“

Negative Pressure
Wound Therapy

Blood Pressure
and HZV Monitoring

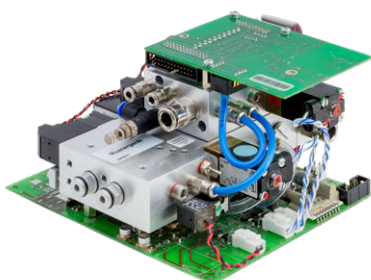

Non-Invasive CGM System

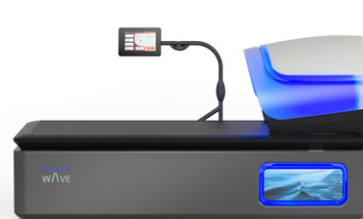

Modular Docking
Station „Jenny“

QR-Robot System

Digital Gas Mixer

Dry water massage bed
